PROFILE

Over 20 years in software development, including engineering and leadership at Amazon Web Services, CBA, and Optus. Helps teams solve difficult software and platform problems, improve delivery, and put AI-assisted engineering into practical use. Available for projects, contracts and consulting, and open to the right permanent role with people I can learn from.

SELECTED PROJECTS & CAPABILITIES

- **AI adoption workshop | April 2026** - Designed, ran and facilitated a four-hour AI-assisted development workshop for DevOps engineers, under contract through Secure Measure. Covered scoping, execution, verification and review, with demonstrations and written synthesis.
- **Platform engineering & leadership | CBA** - Built and operated a private-cloud container platform spanning approximately 1,200 physical servers. Progressed from platform engineer to Tower Lead, leading container strategy and up to five DevOps squads.
- **Windows AppShots | Independent engineering** - Built Windows AppShots so coding agents could see and inspect the Windows apps I worked on. <https://github.com/brianmulder/windows-appshots>
- **Agent integration | Independent engineering** - Integrated Codex, Claude Code, and OpenClaw with browser and desktop automation across Windows and Linux, using reusable skills, explicit access boundaries, and end-to-end acceptance checks.
- **Distributed systems | Amazon Web Services EC2** - Built and maintained regional capacity systems; developed resource monitoring and automation supporting highly available operations and the launch of new EC2 regions, including work on the Sydney buildout.
- **Engineering capability | Optus** - Led engineering remediation following the 2022 cyber incident. Embedded platform product practices, controls-as-code, automated evidence, and clearer service ownership.
- **Product engineering | tessur.com** - Co-founder; built on-device assistant prototypes to help people and their agents check actions against their context and priorities. Rust/Tauri and TypeScript, with Jev classifiers for local screening of risky disclosures and user warnings.

TECHNICAL SKILL SET

Recent project stack: Rust / Tauri, TypeScript / JavaScript, Node.js, Python, Playwright; Jev classifiers, browser extensions, coding agents, Windows UI Automation, CLI / SSH, and MCP integrations.

Engineering background: Java, Scala, C#, Python, Ruby, SQL, Bash; AWS, Kubernetes, Docker, Mesos, OpenStack, Ceph, Vault; CI/CD, DevOps, SRE, Linux, and Windows.

CAREER AT A GLANCE

Tessur - Co-founder, Technology and Engineering | Current

Independent AI Consultant - Through Secure Measure | April 2026

Optus - Associate Director, Technical Product Management | Feb 2023 - Sep 2024

Optus - Associate Director, Engineering Capability | Sep 2024 - Nov 2025

CBA - Scalable Systems Engineer; Engineering Lead; Tower Lead | Sep 2016 - Jan 2023

Jumo - Platform Engineer | 2015-2016

Amazon Web Services - Software Development Engineer II | 2013-2015

FirstRand Group, Global Transactional Services - Software Engineer | 2011-2012

Dariel Solutions - Software Engineer | 2006-2011

EDUCATION

UNISA: BSc Information Technology and Computer Science, Computational Intelligence Stream (awarded 2011); completed while working full-time. CTI: Two software-development / information-systems diplomas (2005-2006).
